

Weekly Learning Project

Week 1

1. Activities Conducted

- I've gone through the designated chapters in the textbook and summarized the essential concepts and definitions.
- Additionally, I finished the exercises scheduled for the week.
- I started working on the group project.

2. Self-Learning Process

- The content delved into various stages and tasks associated with overseeing a software project, encompassing initiation, planning, execution, control/monitoring, and closure.
- Personally, I found the insights gained to be valuable in understanding the holistic process of software project management, aligning well with my career objectives in this field.

3. Self-Critique and Adjustment

- I believe I effectively interacted with the study materials and successfully tackled the weekly exercise.
- I implemented changes in my habits:
 - including the establishment of a weekly schedule and a task-oriented checklist for better organization.
 - I also defined practical and attainable objectives and milestones to guide my progress.

4. Readiness and Willingness to Study

- I am dedicated to the learning journey, and I find fulfillment in both the course content and the associated activities.
- I engaged actively in class discussions and corresponding activities, and I anticipate gaining knowledge from both my peers and the professor.
- I submitted my learning journal on time and am prepared for the upcoming week's topics and assignments.
